What I've Been Reading Lately

Our Scrabble group is talking about what we've been reading lately. Barbara's reading *Running with Scissors*, Bruce is reading *Wuthering Heights*, Susan *The Time Traveler's Wife*, and I'm curling up with *Numerical Semigroups*. It was the title that got me. I always liked semigroups, numerical or not, wondered why the texts never said more about them. And indeed these characters have begun to pull at me; I care about them. My friends laugh when I tell them what I'm reading, laugh again when I say that, like with novels, I skip to the last page. Well, I really want to know how to make a numerical semigroup, how to make all numerical semigroups, want to know what numerical semigroups look like and what happens to them. I don't get to tell my friends that skipping to the end doesn't quite work; even though I've found out what happens, I haven't found out how. Also, I know whodunit but not to whom it was dun.
